# Improving Nurse Navigator Effectiveness and Geriatric Oncology Patient Tracking

MIT Healthcare Lab (H-Lab) 2021 Host: Roger Williams Medical Center (RWMC) Providence, RI, USA

# **Project Background**

## **Nurse Navigator**

Supports geriatric (age 65+) oncology patients through all phases of treatment.

Helps remove barriers to care, increase quality of life, and improve outcomes.

### Program key challenges:

- One resource for ~90 patients
- Isolated program for RWMC
- Growing patient population
- Lack of standardized processes
- Ad-hoc collaboration
- · Cancer Clinic and hospital intake
- Manual, disparate tracking tools

### **Desired H-Lab contributions:**

- Screening measure suggestions
- Academic and market research
- Process clarification and gaps
- Tangible role and tool opportunities

# Methodology

### General and healthcare-oriented process improvement:

- Lean Six Sigma Drive E2E efficiency via value-add activities
- FOCUS-PDCA Emphasize quality with a defined plan

#### Manually locate Receive daily IT Manually and review e-mail report for identify new patient data to patients upcoming visits plan day Filter patient voicemails Manage Coordinate Return on-site current and additional patient care past patient care and (all visit calls services

types

**Current Daily Workflow** 

### Major data insights:

- · Patients need multidisciplinary support
- · Low referral compliance for SW and PT
- Low follow-up visit show rate and long delays
- High variance in patient assessment result changes across different time periods

### Patient Follow-Up Visits

| Initial<br>Follow-Up | # Patients<br>(311 Total) | Net<br>Retention Rate | #<br>No-Show |
|----------------------|---------------------------|-----------------------|--------------|
| 30-day               | 170                       | 55%                   | 141          |
| 90-day               | 142*                      | 84%                   | 28           |
| 180-day              | 122**                     | 86%                   | 20           |
|                      |                           |                       |              |

\*Some who miss the 30-day visit may return for the 90-day \*\*Some who miss the 90-day visit may return for the 180-day

### Assessment-Based Referral Compliance

# **Project Description**

Cancer treatment is a complex process, and it is especially stressful for the elderly. RWMC found a way to help these patients by dedicating a nurse role; a geriatric oncology Nurse Navigator to oversee visits, conduct screening assessments, coordinate team-based care, and reduce stress throughout treatment. However, this important role seemed to keep assuming additional responsibilities. During COVID-19, the Nurse Navigator even had to check all incoming clinic patient temperatures, hardly finding time for main duties.

Hospital management H-Lab to define and evaluate the Nurse Navigator workflow for recommendations to improve efficiency and patient outcomes. We spent months interviewing staff, researching relevant literature, and analyzing data. Our proposed solutions concentrate on modifying current processes and establishing a set of tools with KPIs to manage patients.

The Team

Goldman Khabibulin

Christine Zhang

Special thanks to the highly-engaged RWMC project team, broader interviewees, and our MIT Mentor, Mike Benedetto, as well as our H-Lab instructors and peers!
