R Package

Lu, J.G., Page-Gould, E., & Xu, N.R. (2017). **MicroMacroMultilevel**

This *R* package is useful because in most micro-macro multilevel modeling—where individual-level explanatory variables are used to predict a group-level outcome variable (e.g., Akinola, Page-Gould, Mehta, & Lu, 2016)—it is *statistically biased* to regress the group-level outcome variable on the *unadjusted* group means of individual-level explanatory variables (Croon & van Veldhoven, 2007).

Professional Development Workshop (PDW), Academy of Management Annual Meeting 2017

○ ***Scraping “Big Data” with Your Laptop: A Hands-On Introduction (2 hours)***

This interactive PDW demonstrates how to scrape “big data” from the Internet. After providing an overview of the data scraping process (i.e., the automated identification and collection of information from webpages), we will work with PDW attendees through several hands-on exercises. As an introduction to the key programming commands, our first exercise will scrape online PDF documents. After this warm-up, we will work together to develop the techniques for scraping both quantitative and qualitative data (e.g., the weather data of all U.S. ZIP codes).
